/ FEATURED PROJECT

>> Hotflix - A project that got 3.4k upvotes on Reddit

[LIVE DEMO](#) | [CODE](#) | [REDDIT](#)

A production-ready, open-source Netflix clone built with React, Next.js, styled-component, and MongoDB.

Important features:

- Fully responsive with great UX and UI. "It looks ridiculously amazing." by one of the comments from Reddit.
- Secure sign-up/sign-in authentication with route protection. User information is well encrypted both in the front-end and back-end. Unauthorized visits will be redirected.
- CRUD operation. After login, users can add, save, edit and delete their profiles.
- High performance. Hotflix utilizes SSG pre-rendering technology which makes it super fast and smooth.
- Much more than just a clone. Hotflix reproduces the experience of browsing real Netflix by using reusable React hooks and components along with complicated CSS and multiple API calls. This will be the best Netflix clone you have ever seen.

/ SKILLS

>> Programming Languages

JavaScript(ES6)

CSS/Sass

HTML

>> Libraries & Frameworks

React

Next.js

Redux

>> Tools & Platforms

Git

Github

mongoDB

mongoDB

/ EDUCATION

>> Beijing University of Technology 2011 - 2015

Bachelor of Commercial and Advertising Art

/ OTHER INTERESTS

- Bodybuilding and Powerlifting
- Video games
